## NEW PRODUCTS FROM CGATE

Increased popularity of flat bed printers makes it possible to print directly on many rigid substrates. Cgate aims to provide a complete range of products.

The latest products to be introduced to the Cgate range of rigid materials are:

### EIP FOAM

This is an extremely rigid lightweight composite display board which combines excellent strength-to-weight values and versatility with archival quality which allows its use for display mounting of museum artifacts and materials requiring a non-acidic environment. It has a high density Polystyrene core based material with top layers of EIP (Epoxy Impregnated Paper) sheets.

The smooth finish board accepts screen printing, acrylic and oil paint, and is sufficiently water resistant to withstand exterior use. Uniform density allows cutting by hand and power tools, use of screw or wire fixings, and a variety of adhesives and laminating fabrics.

The standard thicknesses are 5mm and 10mm but other thicknesses can be supplied by request.

The most widely used colour for this material are white or black paper with white or black core.

Sizes: Up to 2x3m

Applications: exhibition stands, decoration, props, temporary signage etc.

**EIP Foam** is more environmentally friendly than similar products with a Polyurethane core.

### FFPVC Lite

This is a lightweight all plastic sheet material with a similar high density Polystyrene core to EIP Foam. The top layers are made from the highest quality Free Form PVC.

**FFPVC lite** is extremely good for outdoor advertising applications as it has good weathering properties. It also has an excellent surface for all types of printing applications including screen and digital printing.

The product is very lightweight with rigid surfaces which are also moisture resistant. Panels can be used both flat or vertically and it is recommended for various signage applications.

The standard thicknesses are 10mm, 15mm and 20mm but other thicknesses can be supplied upon request.

Sizes: Up to 2x3m

Applications: Used as a lighter alternative to Free Form PVC and more environmentally friendly, it can be used both as a poster mount or printed on directly.

## EXPANSION OF CGATE GERMAN OPERATIONS

Initially set up in for distribution of Cbond for which The Igepa Group are sole distributor in Germany, Cgate has now increased the product range that is being stored in the European warehouse to include:

B1 Coated media

One Way Vision

Laminated banner

Display products

This new stock will be welcomed by Cgate distributors throughout Europe as it will now be possible to meet urgent orders.

THE IGEPA GROUP is one of Europe's leading paper merchants, with 40,000 clients in more than 20 different countries. Employing 2,350 people and co-ordinating a network of *strategic European partners*.

#### CBOND IN GERMAN AIRPORT

Aluminum Composite Panels are becoming increasingly popular for a variety of applications. This versatile material is suitable for hoardings, paneling, exhibition stands and even permanent construction.

In these pictures, Cgate's Cbond ACP has been used as a backing for signage in access tunnels at an airport in Germany. The graphics have been printed on self-adhesive vinyl and applied directly to the Cbond.

The surface of Cbond is suitable for direct screen or flat bed digital printing. However, some designers still prefer to print on self-adhesive material which is then applied to the rigid surface.
