

REFLECTIVES

Cgate reflective materials come in a number of grades from PET base advertising with 3-year durability, to Acrylic base license plate grade, which has an 8-10 year durability. There are also engineering grades as well as a PVC base advertising sign material, which is suitable for digital or screen printing.

All Cgate's reflectives have excellent cutting performance and a high level of reactivity, making them suitable for architectural, transportation and general signage applications requiring extended durability.

APPLICATIONS

- High Intensity - Traffic control, Parking and Directional signage
- Advertising PET grade - Can be applied to wood or plastic for rigid signage applications
- Engineering grade - Suitable for markings on vehicles, slow-moving vehicles and school buses
- Advertising Grade Printable - Reflective film, especially suitable for vehicle graphics
- License Plate and Security Films - Engineered specifically for the production of embossed license plates. Can be easily printed on with roller-coated inks or a thermal transfer foil printer

Reflectives
